1.Go to the chrome and open remix platform

2.Open the remix page and create a new file

3.In this newly created file, create a program to return your string "Zone name"

4.Save the program and compile it to get the ABI and Bytecode

ABI Code:

```
[
        {
                "inputs": [],
                "name": "getZoneName",
                "outputs": [
                        {
                                "internalType": "string",
                                "name": "",
                                "type": "string"
                        }
                ],
                "stateMutability": "pure",
                "type": "function"
        }
]
```

Byte code:
